ExampleVideoRelay · wan3.0 audit · Internal decision card

2026-01-15 • internal only • external report: artifacts/ExampleVideoRelay-wan3-audit-report.pdf

fix-first

Fictional example: the video is an Alibaba original (encoder and AIGC tag match), but the link is rehosted on the relay's CDN, usage is missing, and task ids are its own.

Original and cheap, but every field is wrapped, so it can't be integrated as official.

Compared with existing lines for this model

no wan3 line yet (fictional)

Claimed vs measured

Match	Video source	encoder + AIGC tag match official
Wrapped	Response fields	no usage, no official task id

Gateway: Supplier must fix

- **Official task id**: vendor must return it
- **usage**: vendor must return it

Ask business / supplier

- can they pass official fields through

Next steps

- retest passthrough after their fix
